

BEAUTY INGRAINED

WISTON ENGINEERED HARDWOOD

QUALITY CONSISTENCY RELIABILITY

Wiston's mission is to produce a quality product that is consistent and reliable while maintaining the highest environmental standards established throughout the world. We ensure all of our materials come from sustainable forests that meet or exceed the Lacey Compliant standards of the USA and the CE standards of Europe.

WHY CHOOSE **WISTON**

We are the Factory

North American experts control every aspect of procurement and production to ensure each floor meets the highest standards established by the flooring industry.

Perfect Production Climate

Our plant is located in the interior of Northern China, a dry temperate zone with low humidity levels which are ideal for producing engineered hardwood.

Thriving to Exceed

Wiston provides quality products through precision technology and continuous R&D, while meeting the world's most stringent standards.

Ethical Business

Using only sustainable forest practices, our philosophy at Wiston is that while illegal logging may be a common world-wide issue, we the manufacturer also share in the responsibility of solving the problem.

Earth & Home Friendly

Minimizing volatile organic compounds such as formaldehyde in our glues and finishes, while reducing our carbon foot print, means Wiston floors are healthy and safe on any scale of use.

WHITE OAK

White Oak is one of the most popular woods in flooring and has a timeless look complementing any type of decor.

HARDWOOD GRADE GUIDE

The appearance of the wood determines its grade, not a matter of quality. Hardwood floors are graded by the size and number of knots, amount of sap present in the wood, and its colour variations. The higher the grade, the less natural characteristic of woods.

PRIME or AB GRADE

Cut from the center of the log, this grade of woods is highly uniform in its appearance and has very few knots.

SELECT or ABC GRADE

Often described as ABC grade, this wood contains some knots which may be up to 20mm in size, and some colour variations.

NATURAL or ABCD GRADE

Natural Grade is often referred to as mill run or ABCD grade. This wood grade sports knots of up to 30mm in size, contains sap and has some colour variations.

RUSTIC GRADE

This grade of wood has a wide range of colour variations, sap and typically knots of up to 35mm in size and fillers. Rustic Grade works well with eclectic or natural décor.

MAPLE

Wiston uses North America maple which is strong and highly durable. It has a stylish and versatile appearance that fits to any interior design.
